

Crawford Sales is now offering customized Constant Velocity (CV) carburetors. Our CV carburetors have a slide with a diaphragm that uses vacuum in conjunction with a butterfly to control the opening of the carburetor.

We buy complete new carbs but use different parts to customize them for the Ural. First, we completely disassemble the carb. From there, we add or change parts to bring the assembly up to what the Ural engine requires. Our carbs can be used on Ural motorcycles built from the late 1980 bikes all the way up to 2013.

We will be changing jets on the new carbs to match the needs of owner's bike. We can sell just one new carburetor but the other carb being used must be matched to the new carb. Owners must send the second carb to us so we can make a matched pair.

All carbs will have a serial number and the Crawford logo on them so we will be able keep track of them and the owner will know exactly what jets we put in them.

They will all come with the air screw caps, vacuum port caps, vent caps, and a right-side linkage guard.

The first 5 sets sold will have the stainless steel screw set installed.

If you have any questions, email or give us a call. You will have to call to place your order so we can set them up for your bike. There will be other upgrades to offer you at that time. Please visit our "[Performance and Upgrades](#)" page for more information.
